Mould Sale Catalogue 1st June 2017

Handmade papermaking depends in part on the beautiful moulds used to form each sheet individually. This catalogue describes the moulds I have in my collection, the vast majority of which were used at Hayle Mill near Maidstone, in Kent, England between 1818 (the oldest mould) up until 1987 when production ended. There are also a few additional moulds from other mills which I have acquired over the years. Except where otherwise marked all moulds on the list are for sale.

Many of the moulds were digitally photographed in 2010 but this file would be huge if I included images within it so I am putting many of them on-line at http://papermoulds.typepad.com/ If you would like images of a particular mould put on the site, just email me but it may take some time to photograph them. More information about Hayle Mill can be found on https://sites.google.com/site/simonbarchamgreen/. (This latter site cannot be updated).

This catalogue remains a work in progress; some information is not yet available including some prices marked TBA ('To be advised"). If you have any questions, please do not hesitate to ask me.

Simon Barcham Green 1st June 2017 simongreen 22@gmail.com

Notes

Moulds M 1 to M 86 were available for production purposes when this numbering system was set up in the 1970s. Moulds M 100 upwards were so numbered when the moulds were examined for this listing in 1988. The old numbers arise from various cataloguing systems. Historically we had various small ledgers with lists of moulds which had been amended a lot and very hard to understand. The EL numbers are Edo Loeber's cataloguing. Edo was the world's leading expert on European paper moulds. His "Paper mould and mouldmaker", Paper Publications Society 1982 is a fount of fascinating information. Without Edo's inspiration this catalogue would not exist.

104 pairs or single moulds were sold or exchanged between July 1987 and May 2017.

All information, particularly assessment of condition and price is subject to review on receipt of a request for a firm quotation. Prices may therefore be adjusted when quoting - upward as well as downward.

In the case of two sheet moulds the sheet size is followed by "x 2". Where such moulds have several sets of watermarks this is indicated by "x 2", "x 8" etc which is the number of sets per sheet (not per mould). Where size in inches (") is shown this is approximate only. 1 inch = 25.4 mm

W = Wove DL = Double faced laid SL = Single faced laid.

Chain Line (CL) spacing is in mm. F = Fine (over 30 per 25 mm) M = Medium (20-30 per 25 mm) C = Coarse (less than 20 per 25 mm).

"E Amies & Son" includes "Edwin Amies & Son". Other descriptions of Amies are shown as marked on moulds since this may be a clue to their date of manufacture.

*Drawing of layout on separate sheet. Digi = Digital photos taken during 2010-11. Neg No. and Old Nos – refers to monochrome negatives and previous catalogues for my reference only. H Suffix – particular historical or technical interest. Assessment by Edo Loeber with some later additions by SBG. These moulds were withheld from sale until 31 December 2010.

References to racks relate just to my storage arrangements. It helps me to find moulds but you can ignore!

Commercial Bank of Scotland, x 8

RODS,STAYS,EXTRA DECKLES,ETC CONDITION & VALUE

Single mould with one rod, no deckle. Very unusual mould stamped "Sinclair" in cursive 2 £100 script on brass. Not sure if there was such a mouldmaker or is it a mill? Although wove with backing wire, there appear to be no chain lines under ribs. Laid lines sewn to ribs (much of sewing perished) and laid lines stitched in unusual pattern to cover half way between ribs. The sewing pattern is in some ways similar to M294H (?). This is similar to M295H. No guide wires. Could be very early wove. There are also no waterbars at ends or where the deckle dividers would have been and the drain holes are very crudely punched although moulds are generally well made. The cover wire is perished and worn through in many places.

o CONDITION & VALUE

Single mould with no deckle. 2 wooden rods to which every rib (through which it is conventionally 1 - fitted) is fastened with a tiny brass (?) pin. 5 ribs damaged in the post from Spain. Slight damage to laid wires. 2 dowel braces across each corner of mould. Unusual wire fixing from ribs to chain lines which are spaced halfway between ribs (i.e. none on ribs). These sewing wires are at about 450 to face and pull face towards end of moulds. No water bars. Bevel edge to front face of frame which is very light. Capellades state that "The first documentary evidence relating to this family is from La Riba (Tarragona), where on 16 July 1727 Cristofol Miguel received permission to build a mill. It became known as the "Font Gran" Mill, since it was situated next to an abundant spring that rises near the River Brugent a place very near to La Riba. After a No of years a descendent of this Cristofol Miguel moved to Capellades where some of his relations lived. He made the names of the "d' en Patera" Mill (situated near the River Carme next to the "Turo"), as well as of the "Cal Manel" Mill - the second mill on the River Anoia below Capellades. The special product of the Miguels, for which they were widely known, was cigarette paper of all kinds." See copy of Miguel label or leaflet in Capellades folder in archives which clearly shows a Mediterranean umbrella pine with a wreath of laurel to left and stylised pine branch on right & a view of Capellades. See drawing of details.

P Vidal y F. x 2

RODS,STAYS,EXTRA DECKLES,ETC CONDITION & VALUE

Single mould with no deckle. 1 wooden rod to which the outer 4 ribs at each end (through which it is conventionally fitted) is fastened with a tiny brass (?) pin. Single dowel brace across each corner of mould. Some damage cover and backing wire. The latter appear to have no chain lines & just a light wire connecting some of the laid lines together between ribs. The cover and backing are sewn to the ribs with one set of sewing wires. No guide wires or water bars. Slight bevel to face of deckle frame which is very light and shallow. Capellades state "The last two mills fed by the water of the "Bassa" which descend one after the other from Capellades down to the River Anoia, were known - like the "Cal Federico" and the "Cal Gats" Mills - as the "Pablo Vidal" Mills. The Vidals were a Capellades family of ancient papermaking stock. In 1854 their mills were restored and enlarged and this date - together with a carved eagle - appears in the keystone over one of the doors of the mills. Pablo Vidal adapted the well-known mark by Antoni Ferrer and also use two-circles mark which was popular throughout Spain. After the construction of the mill he used an eagle watermark for his cigarette papers, which were also widely and successfully used as writing paper." See copy of Vidal label or leaflet in Capellades folder in archives.

It would have been made in the village a few years before. Made from kus grass laid lines with ends telescoped together as joints and with twists made from pairs of fine nylon threads, repaired at ends in most cases. The chain lines are in groups of 2 or 3 with the individual lines about 16 mm apart and the groups separated by 20 - 30 mm. Cloth repairs to 2 corners. In use round sticks would have been sewn to the long sides and square sticks "sprung" between the round ones to form the ends. The whole chapri was laid onto an open wood frame for support. TERMS AND CONDITION OF SALE

- 1 Whilst details have been recorded with care, I cannot guarantee that there are no errors. Moulds will be rechecked for condition prior to accepting an order. Condition is inevitably a subjective assessment. Whilst I have done my best to be fair and objective I cannot guarantee any mould to be fit for any particular purpose and my liability is limited to the ex-warehouse value of the moulds. Moulds may not be returned for any reason.
- Where moulds have two deckles, the second is usually a replacement for the first which may therefore be worn out. However such deckles are usually suitable for display and in some cases are usable, possibly being thicker than the other in the pair. I will sell one mould and one deckle from a pair of two moulds and two deckles at £50 plus half the price of the pair. Generally the mould and deckle sold will be those in less good condition (if discernible) to leave the other mould and deckle saleable. Exceptions may be made at a higher price if this results in downgrading the unsold mould and deckle.
- I normally charge £30 per parcel for packing plus the actual cost of carriage & postal compensation or insurance and any other appropriate charges. Where possible two or more moulds will be packed in one parcel but conflicting sizes may make this impractical. Please ask for a quote.
- 4 Moulds may only be collected by prior appointment as I do not run a retail shop and the warehouse is not often attended. If you are seriously considering a purchase, I will be pleased to show you individual moulds by appointment.
- 5 Please make payment in full against my quotation before despatch.
- 6 Although every effort will be made to meet delivery estimates I cannot guarantee to do so.
- I do not have an insurance policy so damage in transit is at customer's risk. Where available the Post Office compensation scheme will be used. Note that this is limited in value and paid only at Post Office discretion. Larger orders may go by other carriers who do provide insurance. You may arrange your own shipping if you prefer and where you have an account, you may be able to get a better shipping price than I can.
- 8 Please email me if you do not receive your order within ten days of the invoice date. In the event of moulds arriving damaged, please advise me by email within three days. You should also advise the carrier immediately or your insurance may be invalidated.
- 9 I reserve the right to modify these prices at any time and to invoice orders at the prices ruling at the date of despatch.
- 10 All orders and correspondence are subject to English Law.
- 11 The right to make paper with the existing watermarks fitted belongs either to me or to the original customer of the paper. If you purchase any of these moulds you are undertaking that you will not make paper containing the existing watermarks. You may of course use the moulds for papermaking if you remove the watermarks first.
- * For commercial papermaking we would not usually have used moulds having a condition of less than condition 6 except for small or very occasional makings. However many paper makers should find condition 4 and 5 moulds usable. Condition 10 moulds would be brand new moulds from a first class craftsman, 8 would be excellent, 6 fair, 4 poor, 2 unusable but could be displayed and 1 just holding together. Quite often condition 7 could indicate excellent moulds but a poor deckle or good moulds with one area of localised damage.

HOW TO LOOK AFTER YOUR MOULDS

The starting point may be to remember what they were made for. Either they were soaking wet in use and being treated fairly robustly making a thousand sheets or more a day; or they were tied up tight and kept in a rack in our mould store, cool, dark and rather damp. When new the brass and other metal gleamed but it wasn't polished and the wood was newly cut, planed and sanded and might be lightly oiled with linseed, though this would never be repeated again. All we did routinely was to soak them in clean spring water, slightly scrub off any fibre or other dirt and get the mouldmaker to carry out minor repairs or alter the watermarks. So my suggested do's and don'ts:

Do: Wash them with clean water and allow them to drain

Tie them tightly together (faces inwards to protect) against knocks.

Store them either vertically or on a flat surface

Replace any missing brass nails etc if really necessary

Hang on the wall with mirror plates if you like

Rub lightly with a coarse cloth to take off surface dirt but don't overdo it

Oil with linseed or other suitable oil if you like the appearance but this isn't necessary

Make paper on them!

Don't Polish the brass!

Varnish any part of the moulds and deckle

Treat with chemicals

Leave them in the sun too long or in too dry or too wet conditions

Worry. Some of my nicest moulds are 150 years old and have had no special treatment for decades.
